DEVELOPMENT SERVICES

A second wave of City-initiated construction projects are beginning in the months of August and September

On Valley Blvd. between Curry and Mulberry, the City is completing the extension of the Class I bike path running along the south side of the road. This will allow bicyclists and others to travel safely along this path nearly the entire length of Valley Blvd. This path also links to the Antelope Run Path that extends north and south from Valley Blvd. Due to the proposed bike path location, the City will be making significant street improvements to the south side of Valley between Mill and Mulberry Streets where the existing roadway is deteriorated and experiences regular drainage problems. An extensive network of storm drain piping will be installed to combat this particular problem.

The City also expects to begin the bid and advertisement stage for a sidewalk enhancement project that extends along Curry St. from C Street to Valley Blvd. and along Valley Blvd. from Curry St. to Dennison Rd. The project will also continue down Dennison Rd, and onto Anita Dr. to access the junior high school. This project will construct extensive sidewalk and pedestrian facilities and will complete adjacent sections of roadway along the proposed alignment. This project should be a dramatic improvement for students attending Jacobsen Middle School or the Tehachapi High School.

On Mill Street near Highway 58 the City has begun the bid and advertisement phase for a roadway rehabilitation project extending from the Home Depot north into Capital Hills to Challenger Drive. The existing pavement in this area is severely deteriorated and the City expects to employ several rehabilitation techniques to restore the roadway in this area.

On Tucker Road north of Valley Boulevard, the City has also begun the bid and advertisement phase for a roadway overlay project extending from Valley Boulevard north to the intersection of Cherry Lane. The pavement in this area is failed and requires extensive re-work. The City hopes to utilize a paving grid (fiberglass mesh) to help reduce cost and extend the life of the replacement road.

Come talk to us!

We're always happy to hear from you and are excited to share what is happening in our community.
